Subject: Re: Multiple pools of cardiologist readers

Hi Doug,

There are two evaluations: patient-level (Clinical Parameter) and clip-level (ACEP).

For the Patient-Level (Clinical Parameter) read, **all** 240 subjects (240 study exams, <240 sonographer exams)

For the clip level (ACEP) read, we will have up to 7 readers, and a subset of 5 will read each clip. This subset o
have read all 240 subjects, other will read half, etc. We split the 240 subjects into 4 batches, and assigned each

Hope this answers your question.

Thanks,
Sam
